Deb,

I spoke with Jim Hanley, our mining guru, about trying to pull together such a list. He will work on putting something together today. About the best we can come up with is a list of remedial sites where we know we or someone else have installed bulkheads or plugs. The reality is that there are hundreds, if not thousands, of mine sites in this region with collapsed mineworks that are holding back water.

Just spoke to Sandy. She is forwarding you work already done by Laura Williams to address the Q I posed to you earlier.

Subject: Gold King Mine

Bill and Julie,

Joan asked me to coordinate with the two of you to pull together a summary of mines in Region 8 that may have similar circumstances as the Gold King Mine. Julie, I know you

have already done some of this for MT. Could you please get with Bill and combine information for all of Region 8. For those mines with leaking adits explain why or why they are not like GKM. Let me know if it is possible to provide this information today. Please call with questions.

Deb
